

# LEAD LINE INVENTORY SURVEY

Scan the QR Code to take the Survey

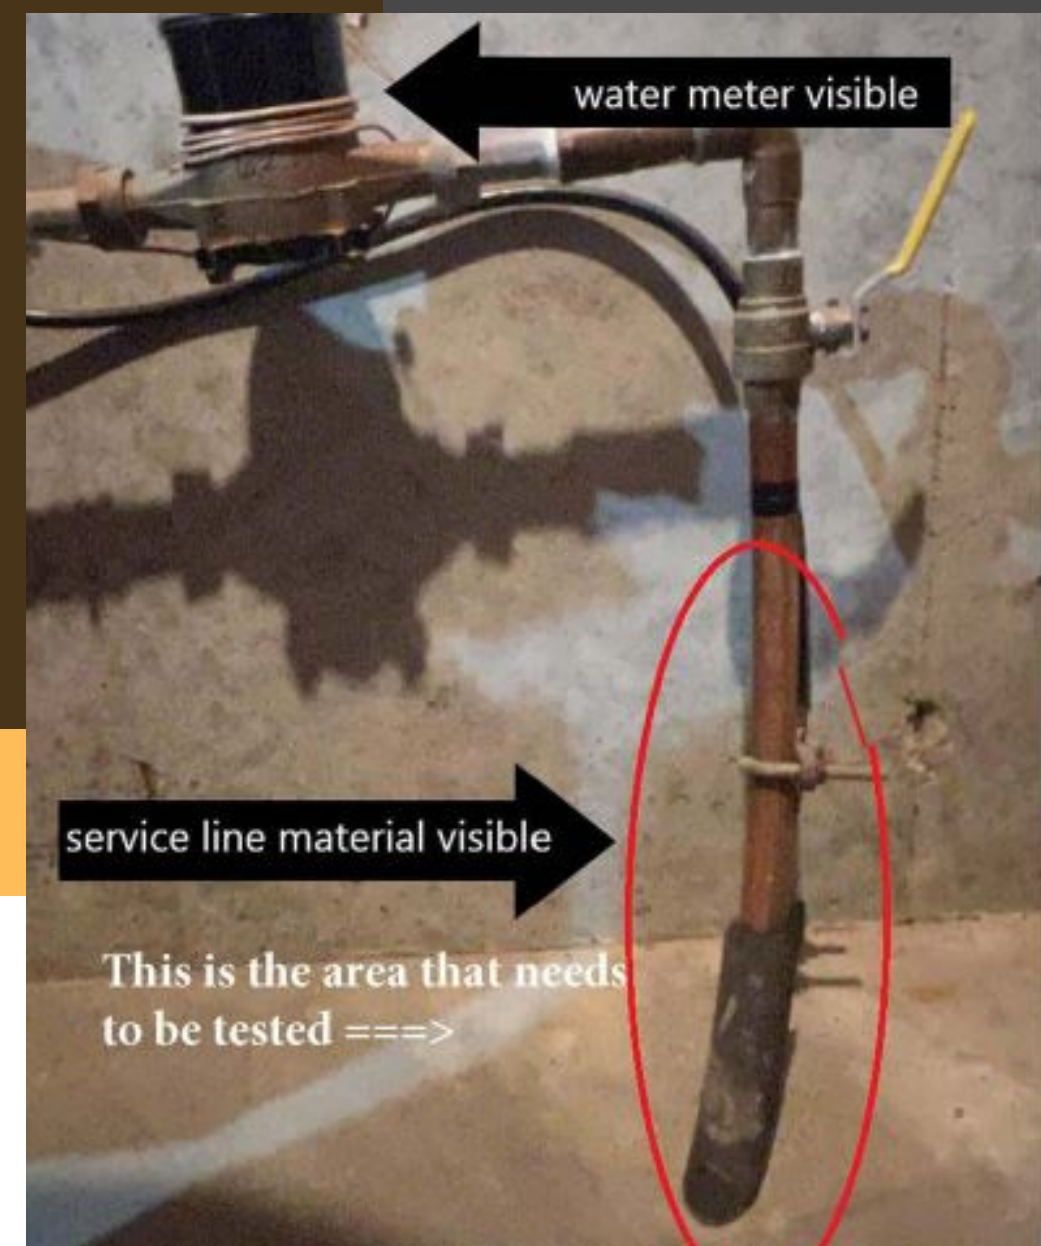

## We need your help!

In December of 2021, the EPA announced its next steps to strengthen the regulatory framework on lead in drinking water. With their new proposed guidelines, every city is required to submit a water service line inventory.

We are asking our customers for help with identifying private service line material to reduce inconvenience associated with potential home or office visits. You can find our survey by scanning the QR code above with your smart phone .

## Where to look

Your service line material is either lead, galvanized steel, copper or plastic/PEX. You can perform some tests on the private side of your service line to determine the material.

You have a lead pipe if...

**The Scratch Test**  
...the scraped area is shiny and silver.

**The Magnet Test**  
...the magnet will not stick to the pipe.

**The Tapping Test**  
...tapping a coin on the pipe makes a dull noise.

You have a copper pipe if...

**The Scratch Test**  
...the scraped area is copper in color, like a penny.

**The Magnet Test**  
...the magnet will not stick to the pipe.

**The Tapping Test**  
...tapping a coin on the pipe makes a metallic ringing noise.

You have a galvanized pipe if...

**The Scratch Test**  
...the scraped area remains a dull gray.

**The Magnet Test**  
...the magnet sticks to the pipe.

**The Tapping Test**  
...tapping a coin on the pipe makes a metallic ringing noise.
